Clinical Respiratory rate measurement: a comparison of methods

The purpose of this paper was to provide information on the design, analysis and interpretation of method-comparison studies to assist clinicians with (1) the evaluation of a new method compared with an established one for measuring a variable of clinical interest and (2) interpretation of method-comparison studies in the literature.

Design, Analysis and Interpretation of Method-Comparison

Method and instrument validation is important issue in clinical laboratory work. Each new method should be validated when introducing in routine laboratory work (1,2). Among different experiments that should be performed to access method's performance (precision and accuracy) there is the comparison of methods experiment (3).
